

FOLISEC

Plant in balance (woody plants)

- Usage** FOLISEC can be used in woody plants in the agriculture and horticulture; whenever a less vital soil and a weak resilience may render plants susceptible to abiotic stress. The product supports the natural regenerative capacity and has a nurturing, nourishing and enhancing effect on the plants of which the soil and roots are affected by external causes.
- Composition** FOLISEC is a water-based, highly concentrated composition made of specific herbal concentrates. Folisec is a natural product of vegetable origin. The product is safe for human, animal and environment. Available in liquid form.
- Operation** FOLISEC is absorbed through the soil and the roots of the plant. Its root-stimulating and plant-enhancing ingredients will allow the plants to indirectly develop an increased resistance and vitality.
- Application** FOLISEC is best applied preventively.
- For optimal performance of the product, dry conditions are required. Cloud cover is important for optimal effectivity.
- Folisec can be administered through spraying or sprinkling onto the plant with a coarse nozzle. Depending on the development of the crop and the abiotic stress factors a follow up treatment could be necessary.

Application and dosage | liquid form

FOLISEC (L) dissolved in water can be sprinkled or sprayed. Spray with a fine nozzle to allow the leaves to absorb the product.

Surface	Normal dosage		High dosage	
	FOLISEC	Water	FOLISEC	Water
M ²				
1.000	1 litre	50-100 litre	2 litre	50-100 litre
5.000	5 litre	250-500 litre	10 litre	250-500 litre
10.000	10 litre	500-1.000 litre	20 litre	500-1.000 litre
