

LAWN INSECTS | SPORT & GOLF

- Usage** GRAMISEC can be used in lawns, sports fields or golf courses; whenever a less vital soil and a weak resilience may render plants susceptible to abiotic stress. The product supports the natural regenerative capacity and has a nurturing, nourishing and enhancing effect on the plants of which the soil and roots are affected by external causes.
- Composition** GRAMISEC is a water-based, highly concentrated composition made of specific herbal concentrates. GRAMISEC is a natural product of vegetable origin. The product is safe for human, animal and environment. Available in liquid and granular.
- Operation Phase 1** GRAMISEC is absorbed through the roots of the plant and the soil. Its root-stimulating and plant-enhancing ingredients will allow the plants to develop an increased resistance and vitality.
- Application** GRAMISEC works best if used preventively.
- An optimum effect requires humid conditions. Failing those, irrigation is necessary.
- The liquid product can be administered by spraying or sprinkling the plants. The granular product can be mixed into the soil before sowing. GRAMISEC remains effective for two to three weeks, after which time, a follow-up treatment may be required.

Application and dosage | liquid form

GRAMISEC (L) dissolved in water can be sprinkled or sprayed. Spray with a coarse nozzle to allow the product to be absorbed by the soil

Surface	Normal dosage		High dosage	
	GRAMISEC	Water	GRAMISEC	Water
m ²				
500	2 litre	50-100 litre	4 litre	50-100 litre
5.000	10 litre	250-500 litre	20 litre	250-500 litre
10.000	20 litre	500-1.000 litre	40 litre	500-1.000 litre

Application and dosage | granular

GRAMISEC (G) can be mixed into the ground before sowing. Mix into the upper 5 centimeter of the cultivated soil. For preventive usage, scatter 400 kilograms of granules on 10.000 m² of cultivated soil. In existing situations the product can be applied wide-spread.
