

# HERFOMYC

## PLANT IN BALANCE

- Usage** HERFOMYC can be used in herbaceous plants in the agriculture and horticulture; whenever a less vital soil and a weak resilience may render plants susceptible to abiotic stress. The product supports the natural regenerative capacity and has a nurturing, nourishing and enhancing effect on the plants of which the soil and roots are affected by external causes.
- Composition** HERFOMYC is a water-based, highly concentrated composition made of specific herbal concentrates. HERFOMYC is a natural product of vegetable origin. The product is safe for human, animal and environment. Available in liquid form.
- Operation** HERFOMYC is absorbed through the soil, the roots and the leaves of the plant. Its root-stimulating and plant-enhancing ingredients will allow the plants to develop an increased resistance and vitality.
- Application** HERFOMYC works best if used preventively.
- For optimal performance of the product, dry conditions are required such that the product is absorbed by the leaves. Cloud HERFOMYC can be sprinkled or sprayed. HERFOMYC remains effective for two weeks after which time a follow-up treatment may be necessary.

### Application and dosage | liquid form

HERFOMYC (L), dissolved in water, can be sprinkled or sprayed. Spray with a fine nozzle to allow the leaves to be absorb the product.

Surface	Normal dosage		High dosage	
	HERFOMYC	Water	HERFOMYC	Water
m <sup>2</sup>				
1.000	1 litre	50-100 litre	2 litre	50-100 litre
5.000	5 litre	250-500 litre	10 litre	250-500 litre
10.000	10 litre	500-1.000 litre	20 litre	500-1.000 litre
