

TERCOL HORTI

Soil insects Horticulture

- Usage** TERCOL HORTI can be used in horticulture where a less vital soil, substrate and weak resistance of the plant and crop can cause abiotic stress. The product supports the natural regenerative capacity, is indirectly nourishing, nurturing and plant-strengthening in case of external influences, in the soil and at the roots.
- Composition** TERCOL HORTI consists of a highly concentrated composition of specifically selected herbal concentrates based on water. The product is of natural and vegetable origin. The product is safe for humans, animals and the environment.
- Operation** FOLISEC HORTI is absorbed by soil, substrate and roots of the plant. Thanks to the available biostimulants and plant-strengthening components, plants and crops will indirectly develop increased resilience and vitality.
- Application** TERCOL HORTI works best if used preventively. In some crops it may be necessary to add a wetting agent. It is recommended to first carry out a trial treatment.
- It is recommended to at the product to the C-container. If not possible, the product can be added to the B-container.

Dosage guideline | liquid
