

SOILLIFE IN BALANCE

Usage NEMATER can be used in herbaceous and woody plants in the agriculture and horticulture; whenever a less vital soil and a weak resilience may render plants susceptible to abiotic stress. The product supports the natural regenerative capacity and has a nurturing, nourishing and enhancing effect on the plants of which the soil and roots are affected by external causes.

Composition NEMATER is a water-based, highly concentrated composition made of specific herbal concentrates. NEMATER is a natural product of vegetable origin. The product is safe for human, animal and environment. Available in liquid, granular, and micro-granular form.

Operation NEMATER is absorbed through the soil and the roots of the crop. Its root-stimulating and plant-enhancing ingredients will allow the plants to develop an increased resistance and vitality.

Application NEMATER works best if used preventively.

An optimum effect requires humid conditions. Failing those, irrigation is necessary. Overcast weather is of importance.

The liquid product can be administered through spraying or sprinkling onto the plant with a coarse nozzle. The granular and micro granular products can be strewn and/or mixed through the soil during sowing or planting. Depending on the development of the crop and the abiotic stress factors a follow up treatment could be necessary.

Application and dosage | liquid form

NEMATER (L), dissolved in water, can be sprinkled or sprayed. Spray with a coarse nozzle to allow the product to be absorbed by the soil.

Application and dosage | granular

NEMATER (G) can be mixed with the soil before sowing. The product can be applied widespread in an existing situation. Mix the product through the upper layer (5cm) of the cultivated soil.

Surface	Normal dosage		High dosage		Surface in M ²	Normal dosage	High dosage
M ²	NEMATER	Water	NEMATER	Water			
1.000	1 litre	50-100 litre	2 litre	50-100 litre	500	10 kg	20 kg
5.000	5 litre	250-500 litre	10 litre	250-500 litre	5.000	100 kg	200 kg
10.000	10 litre	500-1.000 litre	20 litre	500-1.000 litre	10.000	200 kg	400 kg

Application and dosage | micro granular

NEMATER (MG) can be applied to the rows with a fertilizer spreader prior to sowing. Depending on the inter-row distance, the dosage is 15 to 50 kg per hectare. Humid conditions are required.
