

HERFOSEC

Leaf insects in balance for strawberries (herbaceous) (Growing on gutters, propagation of cuttings)

HERFOSEC can be used where abiotic stress can occur due to a less vital soil, difficult weather conditions and poor plant resilience. Herfosec supports the building up of the natural regenerative capacity and the resilience to this abiotic stress in strawberries. This can indirectly prevent and control the nuisance and damage caused by thrips.

HERFOSEC is absorbed by the soil and roots of the plant. Thanks to the available bio-stimulant and crop care components, plants will develop increased resilience and vitality.

Herfosec can be dripped and/or used as a foliar spraying

Administration of Herfosec liquid preferably in the early morning or evening.

- Carry out a test spray before use.
- Do not use the product with bright sunlight.
- Pireco cannot be held liable for any damage resulting from improper use.
- Always consult your cultivation advisor for suitable advice and combination applications.
