

STIMUTER

Roots in balance for strawberries (Open ground fruit growing)

STIMUTER can be used when abiotic stress can occur due to external factors and a less vital soil/substrate and weak resilience of plants and crops. The product supports the natural regenerative capacity, has a nourishing, nurturing and plant-strengthening effect in case of external influences, in the soil and at the roots.

STIMUTER is absorbed by the soil, leaf and roots of the plant. Thanks to the available bio-stimulant and crop care components, plants will develop increased resilience and vitality.

After planting
10L/ha Stimuter
lq.

After 3
weeks 10L/ha
Stimuter lq.

After 2 á 3
weeks 10L/ha
Stimuter lq.

After 2 á 3
weeks 10L/ha
Stimuter lq.

Optionally after 2
á 3 weeks 10L/ha
Stimuter vl.

For optimal performance of Stimuter, leaf application is ideal.

Stimuter can be dripped and/or used as a foliar spraying.

Administration of Stimuter liquid preferably in the early morning or evening.

Can also be used before or during a light rainstorm and irrigation.

- Carry out a test spray before use.
- Do not use the product with bright sunlight.
- Pireco cannot be held liable for any damage resulting from improper use.
- Always consult your cultivation advisor for suitable advice and combination applications.
