

TERCOL

Soil and/or substrate in balance for strawberries (Open ground fruit growing)

TERCOL can be used when abiotic stress can occur due to external factors and a less vital soil/substrate and weak resilience of plants and crops. The product supports the natural regenerative capacity, has a nourishing, nurturing and plant-strengthening effect in case of external influences, in the soil and at the roots.

TERCOL is absorbed by the soil and roots of the plant. Thanks to the available bio-stimulant and crop care components, plants will develop increased resilience and vitality.

For optimal performance of Tercol, humid conditions are ideal.

Tercol can be dripped and/or used as a foliar spraying.

Administration of Tercol liquid preferably in the early morning or evening.

Can also be used before or during a light rainstorm and irrigation.

- Carry out a test spray before use.
- Do not use the product with bright sunlight.
- Pireco cannot be held liable for any damage resulting from improper use.
- Always consult your cultivation advisor for suitable advice and combination applications.
